Summary

Software engineer with 5 years of experience building scalable Python web services, REST APIs, and machine learning pipelines. Skilled in Docker, AWS, PostgreSQL, and CI/CD automation.

Technical Skills

- **Languages:** Python, JavaScript, SQL
- **Frameworks:** FastAPI, Flask, React
- **Cloud & DevOps:** AWS, Docker, Kubernetes, CI/CD, GitHub Actions
- **Databases:** PostgreSQL, MongoDB, MySQL
- **ML:** scikit-learn, PyTorch, model deployment, LLMs, RAG, LangChain

Professional Experience

Senior Software Engineer, Acme Corp
Toronto, ON

Jan 2021 – Present

- Designed and deployed REST APIs serving 2M requests/day using FastAPI and PostgreSQL.
- Reduced infrastructure costs by 30% by migrating batch jobs to AWS Lambda with Docker.
- Built a RAG-based document search system using LangChain and semantic search, cutting retrieval latency by 60%.

Software Engineer, Beta Inc
Vancouver, BC

Jun 2018 – Dec 2020

- Developed Python microservices for an IoT data pipeline processing 50K events/minute.
- Implemented CI/CD pipelines with GitHub Actions, reducing release cycle from 2 weeks to 2 days.
- Led migration from MySQL to PostgreSQL, improving query performance by 40%.

Education

BSc Computer Science, University of Toronto

Sep 2014 – Jun 2018

Projects

ML Pipeline Toolkit

github.com/janedoe/ml-toolkit

- Open-source Python library for model deployment and monitoring; 500+ GitHub stars.
- Supports LLMs, RAG workflows, and AWS SageMaker integration out of the box.
